STATEMENT OF PURPOSE

I am Anjuara Khatun, serving as an Assistant Professor in the Department of Poultry Science. I am keenly interested in pursuing my PhD degree in poultry nutrition at the Queensland Alliance for Agriculture and Food Innovation (QAAFI) research institute at the University of Queensland (UQ), which is known for its world-class research.

At the beginning of my academic life, I was devoted to my studies, which helped me to get academic recognition from my class teachers. They had consistently given me excellent feedback, and their inspiration was motivated by my passion for learning. Later, I got admitted to Bangladesh Agricultural University, which is the mother organization for agricultural study in Bangladesh. I had no study gap. I secured the 1st merit position in both the graduate (out of 76 students) and postgraduate (out of 10 students) examinations. In undergraduate study, I received the **'Prime Minister Gold Medal Award'** and **'University Award'** due to my top merit position among all the students in the faculty. This recognition was distributed by the prime minister of Bangladesh and the vice-chancellor of the university. In postgraduate study, the thesis was titled "**Effects of Feeding Increasing Levels of Dietary Tryptophan on Growth Performance and Meat Yield Characteristics of Broiler Chickens.**" In 2015, I visited Singapore to present my MS research findings. I received the '**Ekramul Hossain WPSA-BB Award'** from the World's Poultry Science Association-Bangladesh Branch (WPSA-BB) for securing the highest CGPA and doing research in poultry under the Department of Poultry Science. I have around four and a half years of teaching experience. I was doing research on poultry from 2014, and I have published three articles in Scopus indexing journals as a first author and in another one contributed as a co-author.

I selected QAAFI, which is a renowned research institute and best for its advanced technologies and facilities. If I get the opportunity to study at UQ, my academic background and research experiences will be helpful for me to acquire advanced knowledge in poultry nutrition, especially in broiler nutrition. After coming back from UQ, I will disseminate my knowledge to develop my nation and university students.

In my family, we are a total of three people with my husband and a baby girl. My husband is an Assistant Director of Bangladesh Bank (Central Bank of Bangladesh), and at present, my husband and baby will stay in my home country. I will be residing in Brisbane, Australia. If I get the scholarship, I believe that I will have the potential to enhance my knowledge by maintaining the UQ higher education authority's rules and regulations.

Sincerely,
Anjuara Khatun
